

AI Replacing Human Jobs

C1 English Discussion

SCENARIO

A company plans to automate many routine roles with AI, increasing efficiency but making hundreds of employees redundant. Is this a fair and responsible step toward the future of work?

FOR

- AI can create new, higher-skilled jobs.
- Automation may make products and services more affordable.
- Companies must adapt to remain competitive.

AGAINST

- Workers may lose income, dignity, and stability.
- The benefits of automation may not be shared fairly.
- Society may not retrain people quickly enough.

Discussion Questions

1. Who should be responsible for supporting workers displaced by AI?
2. Would you accept a job created by AI if it replaced someone else's role? Why or why not?

Social Media Censorship and Free Speech

C1 English Discussion

SCENARIO

A social media platform removes posts that it considers harmful or misleading, but users argue that this limits free expression. Should platforms moderate content, or should almost all speech remain online?

FOR

- Moderation can reduce harmful misinformation.
- Platforms have a duty to protect users from abuse.
- Clear rules can make online spaces safer.

AGAINST

- Censorship can silence unpopular opinions.
- Private companies may decide what counts as truth.
- Users should develop critical-thinking skills instead.

Discussion Questions

1. Who should have the final authority to decide what content is harmful?
2. Can free speech exist online without any limits? Explain your position.

Speak for 4–5 minutes

Genetic Engineering of Babies

C1 English Discussion

SCENARIO

Scientists develop a safe technique that could prevent serious inherited diseases before a baby is born. The same technique might also allow parents to choose traits such as height, appearance, or intelligence. Should it be permitted?

FOR

- It could prevent severe suffering and disease.
- Parents may want to give their children the best start.
- Medical progress often begins with careful experimentation.

AGAINST

- The long-term effects may be impossible to predict.
- Children cannot consent to permanent genetic changes.
- Access could increase inequality and discrimination.

Discussion Questions

1. Where should society draw the line between treatment and enhancement?
2. What risks, if any, are acceptable when changing a future child's genes?

Speak for 4–5 minutes

Privacy vs. Security in Surveillance

C1 English Discussion

SCENARIO

A city wants to install facial recognition cameras in public places to prevent crime and identify suspects quickly. Supporters say the system will protect citizens, while critics fear constant monitoring and misuse of personal data.

FOR

- Surveillance may deter crime and improve public safety.
- It can help identify dangerous suspects quickly.
- People may accept less privacy in genuinely public spaces.

AGAINST

- Constant monitoring can undermine personal freedom.
- Facial recognition systems may make serious mistakes.
- Collected data could be misused by authorities or hackers.

Discussion Questions

1. How much privacy should people give up in exchange for greater security?
2. What safeguards would be necessary before surveillance technology is used widely?
